Our teams work seamlessly together, ensuring that every bit of knowledge is leveraged to deliver high-conviction solutions for our clients.

Fixed Income at New Capital

Concentrated fixed income portfolios built through proprietary top down and bottom up methodologies allowing our investment teams to efficiently identify mis-priced credits anywhere in the world with the most upside potential / hidden value.

We believe fixed income markets are fundamentally flawed as a result of institutional biases such as ratings based restrictions, capital charges, benchmark construction and supply and demand imbalances.

- **Bottom-up approach** aims to quantify the extent to which these forces have mispriced bonds and focus critical credit research on bonds which offer a potentially greater payoff than their peers with similar risk characteristics.
- **Value investment style:** Our unique value style is defined by our proprietary quantitative models which aim to screen the global bond universe to uncover the best value investments.
- **Truly active:** High conviction portfolio construction aims to provide a solution that generates excess returns from credit selection, whilst meeting asset allocation objectives.
- **Efficient portfolios:** Our funds are designed to avoid some of the key structural pitfalls associated with benchmarks, generating higher returns or superior diversification.

Equities at New Capital

Actively managed high-conviction investment equity strategies with global and regional exposures, grouped into one of four categories according to investment style, objective and risk profile.

- **Conviction:** a focus on allocating capital to attractively priced businesses, which are able to deliver sustained compound growth over the long term. These businesses must be robust to competition, have attractive long-term growth prospects underpinned by multiple trends, and be managed by excellent stewards of corporate capital.
- **Growth:** a focus on identifying the highest-quality, fastest-growing companies with highly scalable business models and expanding addressable markets. These strategies utilise a fundamental, bottom-up approach to stock selection that focuses on industry-centric analysis to identify market share gainers with the capacity to drive superior investment returns over a full market cycle.
- **Future Leaders:** a focus on identifying companies that are poised for future success through innovation and disruption. These funds leverage insights from the Future Leaders Network consisting of leading academics and thought leaders to help identify the leaders of the future.
- **Value:** a focus on achieving capital appreciation via a portfolio of high quality U.S. companies with strong long-term earnings growth prospects, which in our opinion, appear undervalued but have a favourable outlook for long-term growth.

Multi-Asset at New Capital

Our multi-asset products harness proprietary bottom up research with our fundamental macro view to achieve optimal asset allocation.

- **Global approach:** a global asset allocation framework powers EFGAM's investment views enabling the fund management teams to make critical decisions for structuring hedging and risk management approaches.
- **Leveraging in house research capability:** we utilise the best ideas across our fixed income, equities and alternatives experts.
- **Dynamic asset allocation:** diversification and dynamic asset allocation across asset classes significantly reduces volatility and risk, while only marginally impacting overall expected returns.
- **Long-term perspective:** EFGAM's asset allocation strategy seeks to encourage a long-term perspective yet allows for nimble movement between asset classes when necessary.

Alternatives at New Capital

Providing innovative and value-added solutions across the entire liquidity spectrum within Alternatives, including Hedge Funds strategies and opportunities in private markets.

- **Solutions-focused:** we strive to provide a range of funds that complement and diversify long-biased, multi-asset portfolios.
- **Focus on niche strategies:** we seek out niche strategies and approaches – to provide additional layers of diversification.
- **A focus on alpha:** we don't take diversification for diversification's sake: alpha is the dominant performance criteria. We prefer to select multiple pockets of concentrated risk-taking.
- **Dynamic asset allocation:** we try to remain pragmatic and dynamic in our asset-allocation preferences in order to retain performance flexibility.

Research is at the core of our investment approach

Extensive proprietary macro research resource and focus

Each month, the Global Asset Allocation Committee, chaired by the Chief Investment Officer, the Head of Research and Chief Economist, set the asset allocation policy and house view. The result is the Global Asset Allocation Matrix. The Global Asset Allocation Matrix combines the team’s long-term strategic view with short-term tactical allocations across all major asset classes, sectors and regions. The strategic allocation captures high-conviction investment themes with a longer-term horizon while the tactical views consider shorter-term themes that we believe will play out over the course of months rather than years.

The conclusions reached inform our asset allocation process influencing both our analysts’ research mandates and how our portfolio managers allocate within client accounts. Being a top-down asset management firm our macroeconomic views are at the core of our investment process.

Risks associated with debt instruments with loss-absorption features – the Fund/Note/Account may invest in debt instruments with loss-absorption features, for example, contingent convertible debt securities (“CoCos”), senior non-preferred debts and subordinated debts issued by financial institutions. These debt instruments are subject to greater risks when compared to traditional debt instruments as such instruments typically include terms and conditions which may result in them being partly or wholly written off, written down, or converted to ordinary shares of the issuer upon the occurrence of a pre-defined trigger event (e.g. when the issuer is near or at the point of non-viability or when the issuer’s capital ratio falls to a specified level). Such trigger events are likely to be outside of the issuer’s control and are complex and difficult to predict and can result in a significant or total reduction in the value of such instruments.
